MULTILINE

Major evolutions within the application – Release 2.10

New Look for the MultiLine screens – a more modern presentation

The MultiLine screens will be relooked! After 6 years, we offer them a new youth; the presentation will be clearer and more user-friendly.

MULTILINE

Introduction

As per March 16th, 2015, all users will automatically see the new screens within their MultiLine application. No further action is required. The transition is automated and will not disturb in any way the opened MultiLine sessions.

MULTILINE

7 points to retain for the new MultiLine screens

1. **Vertical tabs:** the tabs Account Info, Transactions and Sent Transactions will now be disposed vertically and no more horizontally on the screen, which leaves more space for the view.

MULTILINE

2. New refreshed Icons

New statue icons for:

Transactions

		File not valid
		User's interaction is required for acceptance/refusal of additional conditions
		Insufficiently signed
		Sufficiently signed
		Not yet signed

Sent Transactions

		Transaction(s) send, but reception not yet confirmed by the bank
		Transaction(s) send, reception confirmed. Transaction(s) under verification by the bank

These steps are optional :

		Executed: the execution is confirmed by the bank
		Partially processed: the file could not be fully processed
		Refused : the execution has been refused from the bank

3. **Additional buttons:** the major actions per screen are now available under the form of distinct buttons, on the top of each view. The "Delete" button is placed each time below, to avoid any wrong handling.
4. **Central menu bar:** a new central menu bar resuming preferences, my reports and messages with a - Back to welcome page - as well as - Logoff - button will be visible. Exchange rates appear under the Info button. The bar is visible and clickable within Multiline at any moment.

5. **The banks logos:** All your banks are now clickable within Multiline. A click on the bank logo is sufficient to show instantly a menu resuming all the services offered by this bank. It depends on the bank to decide to later on extend or not the options list of this menu.

MULTILINE

6. **« Tab » and « Enter » keys to work quicker**: Some prefer the *Tab* key or other shortcuts more than clicking to enter payments. Now, pressing the *Enter* key is equivalent to executing the colored standard button function.

If you select a button with the *Tab* key, you activate the execution of the function of the button by clicking on *Enter* and not the standard button colored:

7. **Select all when uploading a file**:

Clicking on the header of the column 'Shared' or 'Hide Details' is sufficient to activate the function for all uploaded files when defining the attributes.
